

'Health for all' and 'Reaching the unreachable' are possible only through TELEMEDICINE. Medical Tourism in India is flourishing only because of the advances that have taken place in Biomedical Engineering which is the solid result of Interdisciplinary Medical Engineering. The back bone technology of Telemedicine is Microwave Engineering. That being my specialty, I am deeply interested to see the tremendous part played by it in the field of TELEMEDICINE. I understand that the Telemedicon conference to be held in Bangalore in November 2016 is totally an UNIQUE one and an eye opener for Engineering doctors and Medical Engineers.

Dr. S. Raghavan
Senior Professor, Electronics and Communication Engineering Department,
